

THROAT SCOPE

Illuminating tongue depressor & retraction device provides easy, fast & accurate intraoral examination.

Throat Scope places the **source of illumination inside the oral cavity** for an accurate examination.

Free up an extra hand to position the patient's head, ease a squirming child, or to take a swab.

Children love the **"light saber"** or **"fairy wand."**

Features

- Illuminating depressor provides **superior intraoral examination**
- **Single-handed examination** in the oral cavity
- Single-use depressors **reduce cross-contamination**
- **Portable** and lightweight
